

EMPLOYEE SELF SERVICE (ESS)

User Guide

User Guide · April 2026

Profile Management Overview

When you first access the ESS portal, you are presented with a profile summary view showing key information such as your name, position, reporting manager, staff ID, personal number, organisational details, and years of service. From this overview, you can navigate to your full profile by clicking the View Full Profile button.

The full profile is organised into a series of tabs, each handling a specific category of your employee information. A notification bell in the top-right corner provides real-time alerts for work items assigned to you and for records approaching their expiry date — such as identification documents or certificates.

Identification Management

The Identification Management section allows employees to record and maintain their official identification documents, including passports, Emirates IDs, labour cards, and visas. Each record captures the document type, document number, issuing authority, and validity dates.

When a document is approaching its expiry, a warning label — Expiring Soon — appears on the relevant tab, and a notification is surfaced through the notification bell. Only the current active identification document is displayed by default to avoid confusion from historical records.

Any new identification record or update submitted through ESS is routed through an approval workflow and will remain in a Pending status until reviewed and approved by HR.

Recording an Identification Document

- 01 Navigate to your Full Profile and click the Identification tab.
- 02 Click Add New to create a new identification record.
- 03 Select the document type from the dropdown (e.g., Passport, Emirates ID, Labour Card).
- 04 Enter the document number, issuing authority, and valid from / expiry dates.
- 05 Click Submit to send the record for approval.
- 06 The record status will show as Pending until approved by HR.

NOTE

Once submitted, you can view the record but cannot make further changes until it has been processed.

SECTION 03

DEWA / Ejari Information

This section allows employees to record and maintain their DEWA (Dubai Electricity and Water Authority) account and Ejari tenancy registration details, required for certain housing and utility-related HR processes.

Adding DEWA / Ejari Information

- 01 Navigate to your Full Profile and click the DEWA / Ejari tab.
- 02 Click Add New to enter your details.
- 03 Complete the required fields, including account reference numbers and relevant dates.
- 04 Click Submit to save the information.

SECTION 04

Address Management

The Address Management tab allows employees to maintain their residential and other address details, including description, purpose, street, city, and country or region.

One address must always be designated as your Primary Residence. The primary address is pinned to the top of the list. A primary address cannot be deleted directly — you must first designate another address as primary before the original can be removed.

Address changes are applied immediately and reflected in Dynamics 365 upon saving, without requiring an approval workflow.

Adding or Updating an Address

- 01 Navigate to your Full Profile and click the Address tab.
- 02 To add a new address, click Add New Address and complete all fields: description, purpose, street, city, and country.

03 To mark an address as primary, select it and enable the Primary Residence toggle.

04 To delete a non-primary address, select it and click Delete, then confirm by clicking Submit.

NOTE

You cannot delete your primary address. Assign another address as primary first.

SECTION 05

Contact Information

The Contact Information tab allows employees to manage their phone numbers, email addresses, and other contact details. Each entry can be assigned a type (e.g., business or personal) and a purpose (e.g., home, local). One entry can be marked as the primary contact method.

Contact information changes are applied immediately without an approval workflow.

Adding a Contact Record

01 Navigate to your Full Profile and click the Contact Information tab.

02 Click Add New Contact.

03 Select the contact type (e.g., phone, email).

04 Enter the relevant details, such as the phone number or email address.

05 Select the purpose (e.g., home, local) and indicate whether this is your primary contact.

06 Click Submit.

NOTE

A confirmation prompt may appear before saving. Click Yes to proceed.

Personal Contacts and Dependents

The Personal Contacts section allows employees to maintain details of related individuals, including family members, emergency contacts, dependents, and beneficiaries. Each record includes a relationship type and flags to indicate whether the person is an emergency contact, a dependent, or a beneficiary.

This section is organised into dedicated sub-tabs for each category of information.

Basic Details

Captures core information such as the contact's name and relationship type. You can flag the individual as an emergency contact and select them as a primary contact using the available toggles.

Navigation buttons at the bottom of the sub-tab allow you to:

- Save – saves and remains on the current sub-tab.
- Next – saves and moves to the next sub-tab.
- Skip – moves to the next sub-tab without saving changes.

Dependent Details

Records additional attributes for dependents, including gender, date of birth, and conditions such as student status, disability, or order eligibility. Fields such as Full-Time Student are important for processes like tuition fee or transport concession eligibility.

Dependent Address

Captures address information specific to the dependent, including purpose and primary address designation.

Dependent Contact Information

Communication details for the dependent — phone numbers and email addresses — can be stored here, with the option to define purpose and mark a primary contact method.

Dependent Identification

Identification documents for the dependent are recorded here, including document type, number, issuing authority, and validity dates.

Profile Image

Employees can update their profile photo directly from the ESS home screen. The image submission is routed through an approval workflow and will remain pending until approved by HR or your line manager.

Uploading a Profile Image

- 01 From the ESS home page, click your profile image or the image placeholder.
- 02 In the window that opens, click Choose File and select the image from your device.
- 03 Click Submit to send for approval.
- 04 Navigate to Employee Self Service > Edit Personal Details > Image to monitor the approval status.

Screening

The Screening section displays compliance and pre-employment screening checks associated with your employee profile. Visibility is configured by HR to show only checks relevant to you. This section is read-only for most employees; only items explicitly designated for employee action will be available to update.

Education

The Education tab allows employees to record their academic background, including qualifications, institutions, and study dates. New qualifications are routed through an approval workflow and appear in In Review status until approved.

Adding an Education Record

- 01 Navigate to your Full Profile and click the Education tab.
- 02 Click Add New Qualification.

- 03 Select the qualification type (e.g., Master's, Bachelor's) and enter the field of study and institution name.
- 04 Enter the start date, completion status, and duration.
- 05 Click Submit to send for approval.
- 06 The status will display as In Review until approved by your manager or HR.

SECTION 10

References

The References tab allows employees to record professional references, including referee name, organisation, and relationship. Submissions follow the approval workflow and remain pending until approved.

SECTION 11

NC Checklist

The NC (New Colleague) Checklist displays compliance or competency tasks assigned by HR. Employees can view and update their assigned tasks; submissions follow the configured approval workflow. This tab is only visible where tasks have been specifically assigned by HR.

SECTION 12

Professional Experience

The Professional Experience tab allows employees to record their employment history, including previous job titles, organisations, and responsibilities. All updates are submitted through an approval workflow.

Adding a Professional Experience Record

- 01 Navigate to your Full Profile and click the Professional Experience tab.
- 02 Click Add New Experience.
- 03 Complete the fields: job title, organisation, start and end dates, and responsibilities.

- 04 Click Submit to send for approval.

SECTION 13

Subject Management

The Subject Management tab allows employees to declare the subjects they are qualified or available to teach. One subject can be marked as the primary subject. Submissions are routed through the approval workflow.

Adding a Subject

- 01 Navigate to your Full Profile and click the Subjects tab.
- 02 Click Add New Subject.
- 03 Search by keyword or select a subject from the dropdown list.
- 04 Toggle the Primary flag if this is your main subject.
- 05 Click Submit to send for approval.

SECTION 14

Company Directory

The Company Directory provides a centralised search tool for finding employee information across the organisation. Users can search by employee name or reporting manager to quickly locate contact details, department, and role information.

Searching the Company Directory

- 01 From the ESS home page, navigate to Company Directory.
- 02 Type an employee's name or their reporting manager's name in the search bar.
- 03 The matching employee profile will be displayed, showing department and position details.

Organisational Hierarchy

The Organisational Hierarchy feature provides a live, visual representation of the organisation's reporting structure, fetched directly from Dynamics 365. Changes made in Dynamics are reflected immediately upon refreshing the view.

The hierarchy displays employee photos (where available), names, and reporting relationships. Users can navigate across levels by clicking on any individual to expand their team — particularly useful for understanding approval flows and escalation paths for new employees.

NOTE

The initial load of the hierarchy may take a few seconds. Once loaded, navigation between levels is immediate.

Certifications

The Certifications section allows employees to view and update their professional and compliance certificates. The system monitors expiry dates and displays a clear status indicator for each certificate.

Status	Meaning
Valid	Certificate is current and not near expiry
Expiring	Certificate is approaching its expiry date
Expired	Certificate has passed its expiry date
Invalid	Certificate has been marked as no longer valid

Employees also receive expiry notifications through the notification bell on the ESS home screen.

Viewing All Certificates

- 01 From the ESS home page, locate the Certificates tile showing your certificate summary.
- 02 Click View All Certificates to open the full list.
- 03 Review the status of each certificate and take action on any that are expiring or expired.

Skills Management

The Skills Management section allows employees to view, maintain, and filter their skills and competencies. Any skill added or updated is routed through an approval workflow involving the employee's manager or HR.

Adding a Skill

- 01 Navigate to your Full Profile and click the Skills tab.
- 02 Click Add New Skill.
- 03 Search for the skill by keyword (e.g., "communication") or select from the dropdown list.
- 04 Select the proficiency level from the available options.
- 05 Enter the date acquired and years of experience.
- 06 Click Submit to send for approval.
- 07 The skill will appear in a Pending Approval state until reviewed by your manager or HR.

Questionnaires

The Questionnaires section allows employees to view and respond to surveys distributed by HR. Each questionnaire shows its current status: Not Started, In Progress, or Completed. Employees can save a partially completed questionnaire as a draft and return to it later.

Completing a Questionnaire

- 01 From the ESS portal, click the Questionnaires tab.
- 02 Select a questionnaire with a status of Not Started or In Progress.
- 03 Click Start (or Continue if resuming a draft) to open the survey.

04 Answer each question in sequence using the navigation buttons.

05 To save progress and return later, click Save as Draft. Status changes to In Progress.

06 Once all questions are answered, click Submit to finalise your response.

Intention Questionnaire

A targeted survey distributed to specific employee groups — typically teaching staff — to identify employees who may be considering leaving the organisation. Completed through the ESS Questionnaires tab.

NPS Questionnaire

A brief pulse survey that appears when employees log into the ESS portal. Employees may skip it up to twice; on the third prompt, a response is required before proceeding.

NOTE

The NPS is configured and distributed by HR through the questionnaire schedule in Dynamics 365.

Offboarding Survey

Distributed to employees who are in the process of leaving the organisation. Captures feedback on their experience and reasons for departure. Completed through the ESS Questionnaires tab.

SECTION 19

Approvals and Tasks Workspace

The Approvals and Tasks workspace is the central location where employees and managers can view, action, and track all pending approvals and assigned tasks. The workspace is divided into two tabs:

- Tasks – displays all checklist tasks assigned to you (e.g., onboarding tasks).
- Approvals – displays all items awaiting your approval (e.g., identification updates, education records, skills submissions from direct reports).

Reviewing and Approving a Request

01 From the ESS portal, navigate to Tasks ▢ Approvals tab.

02 The list displays all pending approval items, including the type of request.

- 03 Click on a record to open the full detail view.
- 04 Review the submitted information.
- 05 Click Approve to accept the change, or Reject to decline it.
- 06 The employee's record is updated immediately upon approval.

Creating a Delegation

The delegation feature allows a user to assign their approval responsibilities to another person for a specified period — for example, during leave.

- 01 Navigate to your Approval Settings in the ESS portal or Dynamics 365.
- 02 Select Delegation and click New.
- 03 Enter the name of the delegate who will act on your behalf.
- 04 Set the start date and end date for the delegation period.
- 05 Select the scope of the delegation (all approvals, or specific workflow types).
- 06 Click Save to activate the delegation.

NOTE

Delegations are time-bound and will expire automatically at the end date specified.

SECTION 20

Onboarding Checklist

When a new employee joins the organisation, an onboarding checklist is automatically applied to their profile. The checklist contains tasks to be completed by various parties — the employee, their manager, IT, HR, and other support teams.

Employees can view outstanding onboarding tasks via the Tasks tab in the Approvals and Tasks workspace. Each task displays its name and description, current status, and any dependencies that must be completed

first.

Completing an Onboarding Task

- 01 From the ESS portal, navigate to Tasks.
- 02 Locate the relevant onboarding task in your list.
- 03 Open the task to view its details and any dependencies.
- 04 Once ready, update the status to reflect completion.
- 05 Click Save to record the update.

Checklist Dependencies

Some tasks are dependent on others being completed first. If a task has unresolved dependencies, the system will display them clearly but will not allow the task to be completed until all dependent tasks are finished. The task view shows each dependency, who it is assigned to, and its target completion date.

NOTE

If a task shows as blocked, check the dependencies listed within the task detail to understand what must be completed first and by whom.

SECTION 21

Visa Information Management

The Visa Information Management module allows HR and PRO (Public Relations Officer) teams to configure, record, and track visa and labour card information for employees. Notifications for expiring documents are surfaced through tiles on the ESS dashboard and the expiring records workspace.

Visa Status Reference

Status	Description
Created	Record has been created in the system
Submitted	Application has been submitted to the relevant authority
Approved	Application has been approved
Rejected	Application has been rejected
Finished	Process has been completed

Recording Visa Information for an Employee

- 01 From Dynamics 365, navigate to the relevant employee record.
- 02 Open the Visa Information section.
- 03 Click New to create a new visa record.
- 04 Complete all required fields, selecting values from the configured dropdowns (e.g., Visa Type, MOL Profession, Contract Type).
- 05 Enter the issue date and expiry date for the visa or labour card.
- 06 Click Save to record the information.

NOTE

Descriptions for MOL and MOE profession codes are shown in dropdown lists — not just numeric codes — to ensure clarity when making selections.

SECTION 22

Expiring Records Workspace

The Expiring Records workspace provides HR and PRO teams with a centralised view of all employee documents and visa records that are approaching or have passed their expiry dates. Each tile displays the document type, employee name and UID, expiry date, and days remaining.

Viewing Expiring Records

- 01 From the ESS dashboard, locate the Expiring Records tile for the document type to review.
- 02 Click the tile to open the full workspace view.
- 03 Review the list of employees with expiring or expired documents.
- 04 Take the necessary action (e.g., initiating a renewal, contacting the employee) and update the record.

SECTION 23

Bank Account

The Bank Account section allows employees to maintain their bank details for payroll processing. Information captured includes bank name, account name, account number, and IBAN.

Only one bank account can be marked as Active at any time — this is the account salary payments are made to. Inactive accounts are retained for historical reference. All changes are subject to a duplicate IBAN check and routed through an approval workflow.

Adding or Updating a Bank Account

- 01 Navigate to your Full Profile and click the Payment Methods tab.
- 02 Click Add New to enter a new bank account.
- 03 Complete the required fields: bank name, account name, account number, and IBAN.
- 04 Set the account status to Active.
- 05 Click Submit to send for approval.

NOTE

Only one account can be active at a time. If replacing an existing account, the previous one will be marked inactive once the new one is approved.
